Priya Raman

Data Scientist / Machine Learning Engineer

priya.raman@example.com · +1 555 0173 · Toronto, Canada

Summary

Machine learning practitioner with a Master's degree in statistics and four years of experience taking models from research notebooks to production pipelines. Particular interest in time-series forecasting and representation learning for tabular data.

Technical skills

Category	Tools
Languages	Python, SQL, R, Bash
ML / DL	PyTorch, scikit-learn, XGBoost, Hugging Face Transformers, MLflow
Data engineering	Apache Airflow, dbt, Apache Spark, pandas, Polars
Databases	PostgreSQL, BigQuery, Snowflake
Infrastructure	Docker, GitHub Actions, AWS SageMaker, Google Cloud Platform

Experience

Machine Learning Engineer, Quantaflow Analytics **Feb 2023 - Present**
Toronto, Canada

- Own the demand forecasting pipeline for a grocery retail client: Airflow DAGs orchestrate feature building in dbt and Spark, then training in PyTorch.
- Replaced a gradient boosting baseline with a temporal fusion transformer, improving weekly forecast WAPE from 21% to 15%.
- Set up MLflow tracking and a model registry, making every production model reproducible from a single run id.
- Reduced nightly batch scoring time from 3 hours to 25 minutes by moving feature joins from pandas to Polars.

Data Scientist, Harborview Insurance Group **Sep 2021 - Jan 2023**
Toronto, Canada

- Built a claims-fraud classifier in XGBoost that surfaced 18% more fraudulent claims at the same investigator workload.
- Wrote SQL models and dashboards used weekly by the actuarial team.
- Ran A/B tests on customer communication templates and reported results to product management.

Junior Data Analyst, Lumen Retail **Jul 2020 - Aug 2021**
Remote

- Automated weekly sales reporting with Python and SQL, saving the team about 6 hours a week.

Research

Project: SeismoNet **2020**

- Master's thesis project: a convolutional neural network in PyTorch that detects micro-earthquakes in noisy seismograph recordings, outperforming the STA/LTA baseline by 12 points of F1.

Publication

- Raman, P., Okonkwo, T. (2021). "Detecting low-magnitude seismic events with lightweight convolutional networks." *Journal of Applied Geophysical Data*, 14(3), 211-226.

Education

M.Sc. Statistics, Lakeshore University **2018 - 2020**
B.Sc. Mathematics, Lakeshore University **2014 - 2018**
